

# Cheat Sheet: Reopen Your Crypto Dashboard with ngrok

1. Open your terminal and go to your project folder:

```
cd path/to/crypto-buy-hint
```

Example: `cd ~/crypto-buy-hint`

2. Start your React app:

```
npm run dev
```

This runs your app on `http://localhost:5173`

3. Open a NEW terminal tab/window and start ngrok:

```
ngrok http 5173
```

Copy the `https://...` link that appears

ALWAYS paste the full ngrok link into your browser to access the app

4. If you see a 'Blocked host' error:

Copy the full ngrok subdomain (e.g. `abc1-123-123-123-123.ngrok-free.app`)

Add it to `vite.config.js` like this:

```
server: {  
  host: true,  
  port: 5173,  
  allowedHosts: ['your-subdomain.ngrok-free.app']  
}
```

5. Restart your React server and ngrok:

- Stop both with `Ctrl+C`

- Run: npm run dev
- Run: ngrok http 5173

Optional: Make a 1-Step Launch Script

-----

In your project folder:

```
touch start.sh
```

```
chmod +x start.sh
```

Paste this inside start.sh:

```
#!/bin/bash
```

```
npm run dev &
```

```
sleep 2
```

```
ngrok http 5173
```

Then just run:

```
./start.sh
```
